EM-Micofeed 10% Granules

DESCRIPTION AND COMPOSITION:

Tilmicosin is a broad-spectrum semi-synthetic bactericidal macrolide antibiotic synthesized from tylosin. It has an antibacterial spectrum that is predominantly effective against Mycoplasma, Pasteurella and Haemophilus spp. and various Gram-positive organisms such as Corynebacterium spp. It is believed to affect bacterial protein synthesis through binding to 50S ribosomal subunits. Cross-resistance between tilmicosin and other macrolide antibiotics has been observed. Following oral administration, tilmicosin is excreted mainly via the bile into the faeces, with a small proportion being excreted via the urine.

Product type: Water soluble powder

Content: Tilmicosin (as phosphate) 100g / kg

TARGET SPECIES:

Swine and Poultry.

INDICATIONS:

EM-Micofeed is indicated for the control and treatment of respiratory infections associated with tilmicosin-susceptible micro-organisms such as Mycoplasma spp. Pasteurella multocida, Actinobacillus pleuropneumoniae, Actinomyces pyogenes and Mannheimia haemolytica in calves, chickens, turkeys and swine.

ROUTE OF ADMINISTRATION:

Oral, in feed

WITHDRAWAL PERIODS:

Meat and offal – 14 days

DOSAGE:

8mg to 16mg of Em-Micofeed 10% per kg body weight per day, corresponding to 2kg to 4kg / ton of feed for 15 days.

SHELF LIFE:	PACK SIZE:
3 years	500g, 25kg

FEED ADDITIVES

Antibiotics
