Florosure 50%

DESCRIPTION AND COMPOSITION:

Florfenicol is a synthetic broad-spectrum antibiotic that is effective against most Gram-positive and Gram-negative bacteria isolated from domestic animals. Florfenicol, a fluorinated derivative of chloramphenicol, acts by inhibiting protein synthesis at the ribosomal level and is bacteriostatic. Florfenicol does not carry the risk of inducing human aplastic anaemia that is associated with the use of chloramphenicol, and also has activity against some chloramphenicol-resistant strains of bacteria.

Product type: Feed Additive

Content: Florfenicol 500mg / g

TARGET SPECIES:

Swine.

INDICATIONS:

For the treatment and prevention of swine respiratory disease in infected herds due to Pasteurella multocida susceptible to florfenicol. The presence of the disease should be established in the herd before initiating preventive treatment.

ROUTE OF ADMINISTRATION:

Oral, in feed

WITHDRAWAL PERIODS:

Meat and offal – 14 days

DOSAGE:

10 mg of florfenicol per kg body weight (equivalent to 20 mg Florosure 50%) per day administered for 5 consecutive days.

SHELF LIFE:	PACK SIZE:
3 years	10kg, 25kg

FEED ADDITIVES

Antibiotics
