Seftiovet

DESCRIPTION AND COMPOSITION:

Seftiovet 5% is a long acting injection consisting of ceftiofur (as hydrochloride) 50mg/ml. Ceftiofur is a semisynthetic, third generation, broad-spectrum cephalosporin antibiotic, which is administered to cattle and swine for control of bacterial infections of the respiratory tract, with additional action against foot rot and acute metritis in cattle. It has a wide spectrum of activity against both Gram-positive and Gram-negative bacteria. It exerts its antibacterial action by inhibition of cell wall synthesis. Ceftiofur is mainly excreted in urine and faeces.

Product type: Injection

Content: Ceftiofur 50mg / ml

TARGET SPECIES:

Swine.

INDICATIONS:

Cattle: For the treatment of bovine respiratory disease (BRD, shipping fever, pneumonia) associated with Mannheimia haemolytica, Pasteurella multocida and Histophilus somni. Seftiovet is also used for acute bovine interdigital necrobacillosis (foot rot, pododermatitis) associated with Fusobacterium necrophorum and Bacteroides melaninogenicus, as well as acute metritis (0 to 14 days post-partum) associated with bacteria.
Pigs: For the treatment and control of swine bacterial respiratory disease associated with Actinobacillus (Haemophilus) pleuropneumoniae, Pasteurella multocida, Salmonella choleraesuis and Streptococcus suis.

ROUTE OF ADMINISTRATION:

Subcutaneous (cattle), intramuscular (pigs)

WITHDRAWAL PERIODS:

Cattle: Meat and offal: 8 days
Milk: Zero hours
Pigs: Meat and offal: 5 days

DOSAGE:

Pigs: 1ml / 16kg body weight / day intramuscularly for 3 days.
Cattle: Respiratory disease: 1ml / 50kg body weight / day subcutaneously for 3 to 5 days. Acute interdigital necrobacillosis: 1 ml / 50kg body weight / day subcutaneously for 3 days.

SHELF LIFE:	**PACK SIZE:**
3 years	100ml
